

LOW WATER CROSSINGS ON FORT HOOD

On Fort Hood flash floods can kill. Floods happen normally in Spring (March-June) and Fall (September-October). Fort Hood Installation Operations Center with Range Operations have developed a daily report for all low water crossings and bridges status in the training areas and cantonment area. Use the QR Code below to view low water crossing information or call Range Ops at 254-553-1943.

Many low water crossings are designed to let water flow over the top during flood events. Do NOT cross when water covers the road surface. Gauges may be misleading.
